

## Referring HealthChoice Patients to a Covered Diabetes Prevention Program

Refer eligible HealthChoice patients to the National Diabetes Prevention Program, an evidence-based year-long lifestyle change program designed to prevent or delay the onset of type 2 diabetes.

Providers can refer a patient by contacting the patient's MCO or through the CRISP referral tool. The MCO will help the patient enroll.

Please encourage your patient to participate in the program. Please note that pregnancy is an exclusion for DPP programming.

Use the **Links to DPP information** listed below next to each provider name to learn more about each Medicaid HealthChoice provider's covered Diabetes prevention program.
